

Admin System Safety & Governance Guide

Role permissions, alert configuration, media access, retention, and integration checks.

Purpose

This document supports the Admin interface. Admin users configure access, alert rules, escalation workflows, media-document permissions, privacy controls, and integration health.

Admin-associated risks

- Unauthorized access to audio, video, location, incident notes, or personally sensitive information.
- Incorrect escalation rules that fail to prioritize immediate assistance risks.
- SignalR, notification, storage, or background-worker failure that delays alerts.
- YOLO/video analysis false positives, false negatives, or model-health issues.
- Retention, audit, and export settings that do not align with policy.

Admin precautions

- Keep permissions role-based: riders submit, operators validate, management reviews trends, admins configure and audit.
- Require audit logs for report view, escalation, closure, media download, and rule changes.
- Use retention limits and access review for documents, audio, video, and map/location data.
- Test SignalR popups and alert priority rules after deployment changes.
- Keep emergency contact and SafeTTC help information visible but editable by policy owners.

Admin governance matrix

Admin area	Configuration check	Risk reduced
Access control	Verify each role sees only required pages and evidence	Privacy and unauthorized access risk
Escalation rules	Auto-escalate immediate assistance risks and route/depot-relevant alerts	Delayed response risk
Media storage	Use protected storage and retention rules for uploads	Data exposure and storage loss risk
System health	Monitor SignalR, database, and video worker status	Missed alert and service interruption risk

Sources and implementation notes

TTC public safety guidance says riders can speak to a TTC employee or use the SafeTTC app to report issues directly to Transit Control. Official page: <https://www.ttc.ca/riding-the-ttc/safety-and-security>

TTC SafeTTC information says submissions are monitored 24/7 and can include text, photos, or video. Official page: <https://www.ttc.ca/riding-the-ttc/safety-and-security/safe-ttc-app>

TTC contact information lists Customer Service at 416-393-3030 and customer information at 416-393-4636. Official page: <https://www.ttc.ca/customer-service/contact-us>

For emergencies requiring police, fire, or medical assistance, use 911. The SafeGuard app should not replace official emergency procedures or TTC policy.
