

Management Risk Oversight Guide

Escalation review, trend monitoring, response closure, and safety improvement guidance.

Purpose

This document supports the Management interface. Management reviews escalated incidents, monitors safety trends, identifies hotspots, and verifies that response actions are completed.

Management-associated risks

- Repeated operator harassment, assault patterns, or route-specific safety hotspots.
- High-risk routes, late-night isolated stop patterns, and repeated service-delay conflict.
- Operational gaps such as communication failure, evidence gaps, delayed escalation, or incomplete action closure.
- Privacy, retention, and audit concerns when incident evidence includes sensitive rider or employee information.

Management precautions

- Review escalations by severity, confidence score, route, depot, time, and response status.
- Compare rider, operator, audio, and video evidence before drawing conclusions.
- Use trend dashboards to identify repeated locations, routes, time windows, and risk categories.
- Close the loop with operators and Admin after response completion.
- Use de-identified summaries for trend reporting whenever possible.

Management response matrix

Management task	Recommended action	Safety outcome
Escalation review	Prioritize immediate assistance and high-risk items first	Faster response to serious incidents
Hotspot monitoring	Track repeated risks by route, division, stop, and time window	Improved deployment and prevention planning
Response audit	Confirm acknowledged, escalated, closed, and follow-up statuses	Cleaner accountability and fewer unresolved incidents
Training feedback	Identify recurring report errors or de-escalation gaps	Better operator support and safer reporting behavior

Sources and implementation notes

TTC public safety guidance says riders can speak to a TTC employee or use the SafeTTC app to report issues directly to Transit Control. Official page: <https://www.ttc.ca/riding-the-ttc/safety-and-security>

TTC SafeTTC information says submissions are monitored 24/7 and can include text, photos, or video. Official page: <https://www.ttc.ca/riding-the-ttc/safety-and-security/safe-ttc-app>

TTC contact information lists Customer Service at 416-393-3030 and customer information at 416-393-4636. Official page: <https://www.ttc.ca/customer-service/contact-us>

For emergencies requiring police, fire, or medical assistance, use 911. The SafeGuard app should not replace official emergency procedures or TTC policy.
