

Operator Risk & Response Guide

Risks, precautions, and immediate actions for SafeGuard operator review workflows.

Purpose

This document supports the Operator interface. Operators are the first review layer for rider reports and SafeGuard audio/video detections. They validate evidence, filter false alarms, create operator-originated incident reports, and escalate real risks to Admin or Management.

Operator-associated risks

- Immediate assistance: passenger violence, weapons threats, gunshot-like audio, fight onboard, medical emergency, and severe panic/distress events.
- High risk: glass break, forced-door issues, driver harassment or threats, route hazards, communication failure, and driver distraction.
- Medium risk: fare dispute, intoxicated or distressed rider, vandalism or property damage, crowding near the operator area, and service-delay frustration.
- False positives and sensor blind spots must be documented without overloading the operator during movement.

Operator precautions

- Use large-button actions only while driving; avoid typing while the vehicle is moving.
- Do not physically confront a rider when a threat can be escalated through Transit Control or security.
- Verify the safest available stop, route direction, vehicle ID, and location before escalating.
- Use silent alarm or panic workflow when the situation may worsen if an announcement is made.
- Keep evidence access role-based and minimize audio/video exposure to what is needed for safety review.

Operator action matrix

Situation	Immediate app action	Follow-up
Passenger violence or weapon threat	Silent alarm, panic button, request security or emergency support	Preserve evidence and escalate to Admin/Management
Driver harassment or abuse	Acknowledge, quick report, de-escalation prompt	Escalate if threats, hate speech, or unsafe behavior continue
Vandalism/property damage	Create operator incident report and attach media if safe	Flag for review when active or linked to repeated hotspot
False alarm	Close with reason and keep event for model improvement	Use confidence score and notes for analytics

Sources and implementation notes

TTC public safety guidance says riders can speak to a TTC employee or use the SafeTTC app to report issues directly to Transit Control. Official page: <https://www.ttc.ca/riding-the-ttc/safety-and-security>

TTC SafeTTC information says submissions are monitored 24/7 and can include text, photos, or video. Official page: <https://www.ttc.ca/riding-the-ttc/safety-and-security/safe-ttc-app>

TTC contact information lists Customer Service at 416-393-3030 and customer information at 416-393-4636. Official page: <https://www.ttc.ca/customer-service/contact-us>

For emergencies requiring police, fire, or medical assistance, use 911. The SafeGuard app should not replace official emergency procedures or TTC policy.
